Practical AI skills for a changing world.

AI VERIFICATION CHECKLIST

A quick check before you trust or share an AI answer.

Run this check before you use an AI answer

Not every AI response needs a full fact-check. But if a claim matters, could affect someone, or will appear in work you submit or share, give it a proper check first.

☐	Is the claim important enough to verify? Pay more attention when the answer affects a decision, a grade, another person, money, health, policy or professional work.
☐	Does it contain facts that are easy to get wrong? Numbers, dates, quotations, laws, research findings, names and current information deserve a second look.
☐	Can I confirm it independently? Use a separate reliable source. Asking the same AI again is not independent verification.
☐	Is the source right for this claim? A source can be real and still be weak, outdated or unrelated to the point you are trying to prove.
☐	Does the source actually say this? Open it and check. Do not rely on a title, search snippet or AI summary alone.
☐	Is the information current? For fast-changing topics, check the date and whether newer information has replaced it.
☐	Is important context missing? Look for conditions, exceptions, sample size, location, time period or assumptions that change the meaning.
☐	Would I stand behind this if someone asked for the source? If not, verify it properly, rewrite it more carefully, or leave it out.

A confident answer can still be wrong. Verification is what turns a plausible answer into something you can actually rely on.

These claims deserve a second look

Statistics and percentages Check the original dataset, report or organisation where possible. Make sure the number refers to the right group and time period.	Quotations Confirm the wording and who actually said it. AI can invent quotes or attach real words to the wrong person.
Research findings Look for the original paper or a trusted summary. Check what the study actually measured before repeating the conclusion.	Laws, rules and policies Use the official source when possible. Small wording differences can change the meaning.
Current information Prices, office holders, product features, deadlines and news can change quickly. Check the date.	Named sources or links A convincing citation is not proof. Open it and make sure the source exists and supports the claim.

A 60-second verification habit

1. SPOT	What part of the answer actually matters?
2. SEARCH	Look for an independent, reliable source.
3. OPEN	Read the source itself, not just the search snippet.
4. MATCH	Check that it supports the exact claim.
5. DECIDE	Use, rewrite or leave the claim out.

If you cannot verify an important claim, say that clearly or do not use it.
