

AI READY COLOMBO

Practical AI skills for a changing world.

AI STUDY WORKFLOW

Use AI to support learning without handing over the thinking.

Use AI as part of the study process, not as the whole process

AI can make studying easier. It can also make it easy to mistake recognition for understanding. A good workflow keeps you doing the parts that actually build the skill: thinking, checking and recalling.

1. DEFINE	What are you trying to learn? Pick a concept, skill or question instead of opening AI with no plan.
2. PROMPT	Ask for an explanation, example or practice task. Give enough context about your level and course.
3. INSPECT	Read the answer slowly. Notice what makes sense, what feels vague and what does not match your materials.
4. VERIFY	Check important facts against your notes, textbook, lecturer guidance or another reliable source.
5. DECIDE	Keep what is useful, fix what is wrong, then test whether you can explain or apply it without AI.

A simple example

Instead of

"Explain photosynthesis." Then reading the answer once and moving on.

Try

Ask for a short explanation at your level, compare it with your notes, close the AI, then explain the process from memory.

If you cannot explain it without the AI open, you probably have more studying to do.

Use different prompts for different parts of learning

UNDERSTAND Use AI for: explanations, examples, analogies and identifying prerequisite gaps. Try: “Explain [concept] at the level of a first-year student. Give me one example, then ask me to explain it back in my own words.”	PRACTISE Use AI for: practice questions, interview-style questioning and feedback on your own attempt. Try: “Give me one practice question at a time. Wait for my answer before giving feedback or the solution.”
REVIEW Use AI for: turning your own notes into recall questions, spotting gaps and planning revision. Try: “Use only the notes I provide. Create ten short recall questions and mark which topics seem under-covered.”	CHECK Use AI for: finding claims that need verification, testing your reasoning and showing possible counterarguments. Try: “Which parts of this answer should I verify before I use it in an assignment?”

Before you finish a study session

☐	Can I explain the main idea without looking at the AI response?
☐	Did I answer at least one question or problem before asking AI for the solution?
☐	Did I check important facts against my course material or a reliable source?
☐	Can I tell which ideas came from my notes and which came from the AI?
☐	Do I know what I still do not understand?

The useful question is not “Did AI help me finish this?” It is “Did I learn enough to do the next part myself?”
